

DÉTRUIRAT®

THE SOLUTION TO YOUR MOUSE AND RAT PROBLEM

The CS DétruiRAT® is an advanced electric trap designed for the eco-friendly and hygienic control of rats and mice. Thanks to its smart detection and electrocution system, rodents are eliminated quickly and effectively, without the use of poison.

The CS DétruiRAT® Maxi-Prises trap is a powerful, automated device for rodent control. Equipped with advanced technology and intelligent programming, the Maxi-Prises is designed to capture a rat, kill it rapidly, reset itself, and subsequently capture other rats.

When a rat enters the trap, an infrared barrier activates two electromagnets, causing the two doors to close within 120 milliseconds. The rat is trapped and attempts to escape, but runs directly into the electrocution cells, where it receives a 6000 V electric shock, resulting in immediate and painless electrocution.

The collection tray facilitates the removal of the carcasses.

ADVANTAGES

No poison needed – safe and eco-friendly

Works for both mice and rats

Safe for the user and the environment

Hygienic emptying without contact with dead animals

Protect the trap from the elements:

CS DétruiRAT® traps are not designed to be exposed to rain. Ensure that you protect them from the elements by placing them in a sheltered location.
