- Finishers (in phase I and II fattening): 0.3-0.5% (3-5 kg/ 1 ton of feed)
- Sows: 0.2-0.4% (2-4 kg / 1 ton of feed)

Paste (Curative)

In a single dose, repeat after 12 hours (2 doses per day) · Piglets - 2 ml

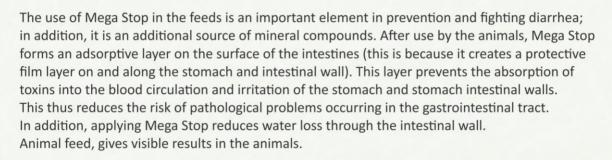

MEGA STOP

The product

Mega Stop is a combination of clay (kaolite) and carbon that was naturally produced and mixed centuries ago. The powder is for daily use and has a preventive effect.

Mega Stop has a positive influence on:

- Improving the quality of fattening
- Improvement of reproductive indicators
- · Efficient use of feed
- · Reduction of morbidity
- · Gastrointestinal tract protection
- Improve sanitation
- · Elimination of diarrhea
- Improve stool consistency
- · Reducing urea levels in the body
- Reducing Escherichia coli and Streptococcal outbreaks
- Reduction of food diarrhea during feed switching and/or weaning

Mega Stop is a 100% natural product, does not lead to negative effects when used and causes, as far as known, no negative interactions with other feed additives and pharmaceuticals. Mega Stop is a natural detoxicant and is easy to use in all types of feed.

Composition and properties

Mega Stop binds toxins, mycotoxins, endotoxins and enterotoxins based on physical and molecular interactions of cohesion forces, resulting in their removal from the digestive tract at the animal proceeds extremely quickly and efficiently. A molecule of Mega Stop

Due to the highly porous structure and the presence of aluminosilicates, carbon, calcium, magnesium, iron, phosphorus, manganese, sodium, potassium, copper and selenium, Mega Stop provides an effective prevention against many diseases and diarrhea. This improves the quality of the livestock.

Mega Stop is based on: Carbon 25 a 35% · Silicon 32 a 38% · Aluminum 16 a 21%
