

COMFORT FOOT BATH

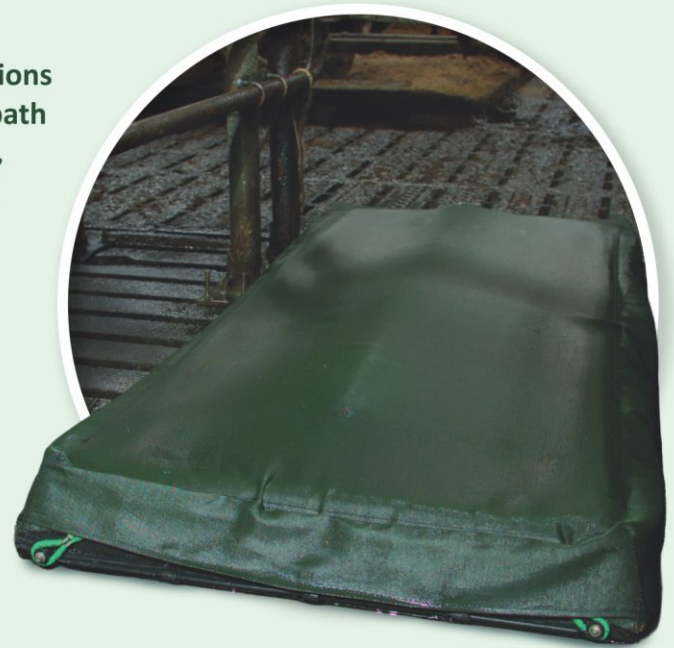

At Comfort Solutions, maximum efficiency is our priority. This starts with healthy animals and sustainable barn solutions on dairy farms. That's why Comfort Solutions offers a footbath for effective and low-maintenance hoof care in dairy cattle, helping to prevent diseases like Mortellaro and interdigital dermatitis.

Same effectiveness, less product

Thanks to the large contact surface, the claws are completely submerged, ensuring an optimal and even effect. The top sheet also protects the disinfectant from contamination: dirt slides off the surface and doesn't end up in the liquid.

This keeps the product effective longer, reducing the need for frequent changes. The clever design significantly reduces the amount of product needed.

Up to 80% less compared to a regular foot bath!

Simply tilt the tub to empty it, and the top sheet can be quickly cleaned or replaced. Thanks to its modular design, individual parts can be replaced separately. This saves time, minimizes maintenance, and extends the lifespan. Available in manual filling and complete with a pump.

Key Features

Footbath Dimensions: 200 × 85 × 19 cm • **Capacity:** 30 L

Thanks to the sophisticated design, hooves are optimally treated, while product consumption is reduced by up to 80% compared to conventional footbaths of comparable size.

- Suitable for **various types of disinfectants**
- **Filter cloth top sheet separates manure and product**, ensuring the product remains effective for longer
- **Comfortable and safe** for the animal
- **Low-maintenance and user-friendly:** easy to fill, empty, and clean
- **Longer lifespan** compared to conventional mats
- **Modular design** with individually replaceable parts
- **Durable design with PFAS-free and recyclable PP cloth**
- Suitable for almost any barn configuration
